PROFILE

Full Stack Developer currently doing my **internship** at Ilo Share Your, a **lead capture SaaS platform**, where I build and **ship features end-to-end** using **Next.js, React** and **Laravel**, including integrating LLM APIs into the core product. I'm actively looking for a **full-time role** where I can keep growing alongside a strong team.

EXPERIENCE

Ilo Share Your | *Junior Full Stack Developer*

March 2026 – **Present**

- **AI Catalog Import Rebuild:** Replaced a **fragile** Python/Tika pipeline powering the platform's existing AI-based catalog import with a **Laravel service** integrating directly with an **AI API** for PDF-to-structured-data extraction, significantly improving processing **efficiency** and **speed**.
- **KYC & Lead Enrichment:** Built a multi-step KYC onboarding flow (**Next.js/React, Laravel**) integrated with a third-party enrichment **API (BrightData)** to enrich leads with LinkedIn profile/company data.
- **Auto-Translate:** Built an auto-translate feature so a visitor viewing a client's digital business card **automatically** sees the card's content in their **own language**.
- **Platform Migrations:** Migrated the **QR code** system to a new library, improving **scan readability** and unlocking richer customization options and rebuilt the **vCard** export to reliably extract complete contact data and ensure consistent compatibility across iOS and Android.

PROJECTS

AppointMe | [Source Code](#) | [Live Demo](#)

Next.js | TypeScript | React

- **Role-Based Architecture:** Engineered a **full-stack** appointment platform featuring a dual-role onboarding system (Provider/Client) with custom middleware to enforce secure access control and prevent unauthorized role-switching.
- **Type-Safe Data Modeling:** Architected a relational schema using **Drizzle ORM** and **PostgreSQL**, utilizing enums and strict **TypeScript interfaces** to eliminate runtime data errors and maintain 100% schema consistency.
- **Secure Asset Management:** Optimized performance and security by implementing **AWS S3** file uploads via **pre-signed URLs**, reducing server-side load and ensuring private data handling.

Life Tracker & Self-Hosted Homelab | [Source Code](#)

Next.js | Spring Boot

- **Full-Stack Delivery:** Built a personal productivity app end to end (**Next.js, Spring Boot REST API**) covering tasks, notes, and a calendar.
- **Automation & Integrations:** Connected the app to a Telegram daily check-in bot via **n8n workflows**, and self-hosted a local **LLM (Ollama)** on a home server to power it.
- **CI/CD & Infrastructure:** Set up a **GitHub Actions** pipeline deploying over **Tailscale** to a self-managed **Ubuntu Server** homelab running **Docker**, with services exposed securely via a **Cloudflare Tunnel**.

EDUCATION

2024 – 2026 **Σ.Α.Ε.Κ ΔΕΛΤΑ 360**

Greece, **SKG**

Web Developer/Designer

Relevant Coursework: Data Structures & Algorithms, Computer Architecture, Operating Systems, Data Communications, Object-Oriented Programming, Databases.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, TypeScript, PHP, Java.

Developer Tools: AWS, Postman, Git, GitHub Actions, n8n, Docker.

Libraries/Frameworks: React, Node.js, Express.js, Next.js, TailwindCSS, Spring Boot, Laravel.

Databases: MongoDB, Firebase, SQL, PostgreSQL.
